

design **TOSCANO**[®]

**INSTRUCTIONS
FOR YOUR PRODUCT**

Thank you for your recent purchase of this Design Toscano hand-crafted garden fountain. We have taken great care to create this piece especially for you. Please review these instructions and assemble this piece with care.

1. Install the pump. Attach the tubing to the outlet of pump and then place the pump into the fountain body. Feed the pump power cord through the pvc tube inside the fountain and out the bottom (Note: Please wear gloves when putting pump into the tube, thus avoiding your hands being exposed to sharp material).
2. Fill fountain with water in the highest basin and until water can be seen in the lowest basin.
3. Insert the pump plug into an outlet and switch on. Check to see whether the pump works normally. (If you need to adjust the flow speed, please disconnect from the power supply and take out the pump. Then follow the pump instruction to adjust the flow speed.)
4. Fasten the pump cover. Put the cover onto the gap of fountain body and tighten screws.

Adjust the pump flow rate to achieve the desired effect and to minimize any splashing. Splashing can occur if the flow rate is too high or the feature is too full. The flow rate can be increased or decreased by moving the flow rate control slider on the pump body. Moving the switch towards (+) will increase the flow rate and moving it towards (-) will decrease it.

WARNING:

Never turn on the pump before the fountain is full of water. Also do not let the water level fall below the top of the pump as the pump will become damaged if run without water. Fountain should be placed on a level surface.
